

# SONIC WAKA

Hi there. Thanks for your interest in Sonic Waka.

Unlike other manufacturers, we use a process called vacuum infusion for ALL of our models. This keeps the weight variance to a minimum and makes for a much more rigid, stronger Waka than the traditional process.

## STANDARD CONSTRUCTION

Standard fibreglass on both the hull and deck.

Weight: Approx 16.5kg  
Price: **\$4,599**

## TURBO MODEL

Hybrid mix of 200 gram Carbon Fibre and E Glass, vacuum infused over a Soric Core for extra strength and performance.

Weight: Approx 15.5kg  
Price: **\$5,599**

## SUPER SONIC

Our top performing Waka. Full Double Bias Carbon Fibre on both hull and deck, vacuum infused over a Soric Core for maximum rigidity and performance.

Weight: Approx 14.5kg  
Price: **\$6,599**

(Includes FREE upgrade to Lightweight Carbon Fibre Kiato).

All Waka come with a custom fitted foot rest. Our Waka also come with a full guarantee against any manufacturing faults and we have a purpose built factory in Gisborne for all of the necessary after sales service.

## OPTIONAL EXTRAS

**Double Foot Pump: \$290**

**Lightweight Carbon Fibre Kiato: \$575**

(\$475 with purchase of turbo or standard construction Waka).

**Names:** Want to name your Waka? We can print and apply stickers to your new Waka. Starting at: **\$45**

**Extra Artwork:** Your Waka comes with two colours as standard (Super Sonic comes with three colours). Additional colours and complicated artwork incur extra charges. Feel free to request a quote for your chosen artwork or colour scheme.

## FOOT REST MEASUREMENT

We make your Waka custom to your height so we need a leg measurement for the foot rest. Sit on a box that is 250mm high and place your legs out in front of you like you are sitting in a Waka. We need the measurement from the front edge of the box to where your heels are. We then use that measurement to fix your foot rest in the correct place. (See diagram right).
